

Mastek is a 2018 European Software Testing Awards Finalist

Mastek has been selected as a finalist in two categories of this year's [European Software Testing Awards](#). Now in its sixth year, The European Software Testing Awards celebrate companies and individuals who have accomplished significant achievements in the software testing and quality assurance market.

The categories that we have been shortlisted in are:

- 1) **Best Agile Project:** Student Loans Company (SLC) in partnership with Mastek
- 2) **Best Test Automation Project - Functional:** Specsavers in partnership with Mastek

A key selection criteria set out in the 'Best Agile Project' category was 'verification of project goals, importance, achievements and successful results.' Using Agile methodologies, [SLC](#) working with key delivery partner, Mastek and supported by other teams delivered the UK government's enhanced policy for Part Time Maintenance Loans (PTML) within highly aggressive timescales - essentially recovering 3 months based on initial delivery forecast.

Judges were looking for 'demonstration of the best use of automation in a functional software testing project,' as part of the criteria for the 'Best Test Automation Project - Functional.' [Specsavers](#) along with Mastek automated a digital platform from nothing to continuous integration with functional and performance test - achieving an automation coverage of 100% UI and 82% API's, saving £3543/- in each regression cycle.

All the very best to the other Finalists! We look forward to the Awards announcement on 21 November.
