

Mastek to Deliver Notification Engine for a UK 'Digital Only' Bank

May 6, 2016

Reading, U.K. – May 6, 2016 – Mastek contracts with a UK Digital only bank that offers its customers the full range of retail and business banking products through a mobile application only. The digital mobile platform will be the main communication gateway with the Bank's customers. This project win demonstrates Mastek's ability to engage with the banking community by adding business value through delivering innovative technology in the digital space.

Mastek is designing, developing and implementing a notification engine as part of the project. The engine will deliver banking and client-driven event activities to the Bank's clients through the mobile channel. According to Nigel Heller , Head of Financial Services and Banking, Mastek UK, "What really makes this project exciting is the design of the notification engine enables the Bank to be independent of any internal system – building future-proofing, a key requirement of the project. Additionally, the notification engine sits at the very heart of the banking infrastructure and integrates with all other key banking systems."

As part of the sales engagement, Mastekers participated in a Hack-a-thon to develop a proof of concept (POC) for the Bank in August last year. The Hack-a-thon quickly enabled the Bank to position its challenge. Within a day, Mastek built a solution, accepted by the Bank as a way forward and into a PoC, prior to contracting for the end to end solution.

About Mastek

Mastek is a digital transformation solutions provider with over three decades of experience. Every day, over a million people across the UK use services that run on Mastek technology.
