

Mastek Wins New Digital Data Platform Project at the EBRD

The new data platform will increase the Bank's operational efficiencies and customer engagement across multiple countries.

Reading, U.K. – Jan 04, 2018 – The European Bank for Reconstruction and Development (EBRD) has awarded Mastek a three-year contract to deliver a new data platform. The EBRD is a global development investment bank that uses investment as a tool to build market economies in developing and emerging countries.

The project is being implemented as part of the EBRD's digital transformation plan to deliver enhanced operational and customer engagement globally. Mastek will design, deliver and support the new data platform, which will serve as the bedrock for digital expansion. It is being built on the MapR, Converged Data Platform, which will allow the bank to harness the power of its data to improve business outcomes.

According to Richard Williams, Managing Director – IT at EBRD, “We promote market-oriented economies and private and entrepreneurial initiatives in the countries we operate. Mastek is our preferred supplier for data platform, data integration services and identity access management. Their deployment of the digital data platform will help reinforce our commitment to entrepreneurship, and accelerate the pace at which we foster change in economic systems.”

“Our proven track record of implementing and managing complex data solutions for multinational private and public sector enterprises, as well as our ability to partner collaboratively and the similar corporate values we share is an affirmation of our best-fit with EBRD.” says Andy Hicketts, VP - Private Sector. He added, “We look forward to building our relationship into an enduring long term partnership.”

About Mastek

Mastek is a digital transformation specialist that engineers excellence for customers in the UK, US and India. We enable large scale business change programmes through our service offerings, which include agile consulting, digital commerce, BI and analytics, application development, support and testing. Whether it's creating new applications, modernising existing ones or recovering failing projects, we help enterprises to navigate the digital landscape and stay competitive.
