Mastek supports NHSD to achieve "high fidelity"

Mastek has won a £20m, four-year contract with NHS Digital supporting its Data Services Alliance – Collections programme.

The aim of the transformation programme is to give NHS Digital customers improved and secure access to data. As the national information and technology partner for the UK health and care system, NHS Digital must harness the power of information and technology to continuously improve health and care outcomes. Having high quality timely data for analysis and reporting, both in support of enabling quality care provision and to enable customers to inform national policy and local commissioning, is a vital part of that.

Mastek will support NHS Digital to improve and migrate the legacy services to the 'Data Processing Service', closing data centres and establishing new data pipelines and analytics tools in a cloud platform.

Our conversations with Mastek reveal: "Customers will be able to access data from a single source of truth - with high fidelity and from authenticated linkages via a secure Data Access Environment (DAE) and Trusted Research Environments (TRE), which will ensure the right person, with the right legal basis, has access to the right data for their needs." Developing this technically secure and robust mechanism reduces the need for data to leave NHS Digital at any time.

According to TechMarketView estimates, c34% of Mastek's £106m of UK public sector SITS revenues in its financial year to 31st March 2022 were attributable to the healthcare sector. As we highlighted in our [TechMarketView Market Readiness Index 2022](#), the company has quickly penetrated the sector over the last two years. With a strong vision to accelerate the digitisation of healthcare to improve patient care, and supported by collaboration with partners, it has penetrated an array of NHS accounts and built a significant footprint and reputation. Alongside NHS Digital, clients include NHS England & NHS Improvement, NHSX, the Department of Health & Social Care (DHSC); NHS Business Services Authority; South, Central and West Commissioning Support Unit; and Northampton General Hospital.
