Supply-Chain On-Cloud

Background

Industrial companies are turning to cloud solutions to scale faster and keep their customers happy. Regardless of the ERP solution, it's nearly impossible to have 100% inventory accuracy if there are manual or paper-based processes. From the warehouse to the shop floor, cloud solutions are being sought to maximize productivity and accuracy by:

Providing secure, anytime-access and data validation to ERPs

Leveraging the automation benefits of technologies like barcodes and RFID

Eliminating time-consuming and inaccurate paperwork

Providing real-time visibility into the warehouse, shop floor, and service functions.

Not Just Data Collection, Outcome Oriented

Customers are looking towards increase in inventory management accuracy, ease of operation and improvement to customer service while investing in such solutions.

Why use WH360

WH360 is an industry-leading solution that provides some of the most advanced real-time inventory management tools like cycle counting, mobile pick pack ship, and work center reporting. Hundreds of Oracle SCM customers have turned to WH360 to eliminate shipping errors and increase the speed of their operations. WH360 takes over where ERP systems leave off.

Mastek recommends WH360 because WH360 measurably improves accuracy, productivity, visibility and profitability across functions with the following features:

Built-in Oracle SCM (Native)

Has quick installation and training times
User-friendly UI

Advanced, value-adding functionality like Inbound & Outbound License Plating

All WH360 applications, system settings, workflow configurations, reporting and related utilities are managed through a single application platform: the WH360 Smart Console.

WH360 - SaaS

Multi-tenanted SaaS Solution

The multi-tenanted SaaS solution is a singular implementation on a secured cloud with its features offered as a service. The solution is equipped with business configurability and thus handles functional changes with least impact to business and operations.

A glimpse to the flow

Demonstration of Inbound Transactions, Outbound Transactions, Warehouse Transactions (Intra-Warehouse)

Product Integrated Features
